

Driver or Chaperone

Please read thoroughly, initial and sign.

_____ To assure safety after an oral sedation, patients must be accompanied to their residence and for the rest of the day by a responsible and mature chaperone.

_____ As the driver/chaperone, we ask that you be available when the patient is dismissed from the office. Since the precise time of dismissal cannot be predicted, please accompany the patient to the office and advise the staff of a phone number where you can be reached. We will telephone you approximately ½ hour prior to the patient's dismissal.

_____ Assist the patient to his lodging. Be sure to help when walking, crossing streets, climbing stairs, or passing other obstacles. The patient **MUST NOT DRIVE** an automobile or operate potentially dangerous equipment.

_____ Use every means to assure that the patient remains quiet and rests for the balance of the day. Alcohol and un-prescribed drugs should be avoided overnight.

_____ The effect of the Oral Sedation drug may seem to be completely worn off when you take the patient home; however, there may still be slight residual effects that impair judgment and coordination. This is the primary reason why we ask that the patient be chaperoned for the rest of the day.

_____ If you have any questions, please feel free to ask the doctor or any member of the staff. (801) 255-7645

I have read thoroughly and completely understand the importance of my chaperoning throughout the day of surgery.
